Riesa to other factories without interfering with the cement factory production program.

25X1

by Krupp-Gruson in its production of cement factory equipment.

- 4. Materials needed are to be obtained within the State of Saxony so far as possible, otherwise in the Russian zone.
- 5. On 11 October the steel factory at Hennigsdorf was inspected by the same representatives of SMA and the Central Administration of Industry, together with officials of SMA Potsdam, representatives of the Brandenburg government, and plant officials. Here Koval ordered the installation of four Siemens-Martin furnaces with a minimum annual capacity of 120,000 ton steel blocks and 6,000 ton cast steel and three rolling mill units (for large, fine, and wire rolling). Construction work is to be carried out by Omu II. The chief of Omu II is to draft a work plan in coordination with the deputy chief of SMA Potsdam. The deadline for the beginning of production is 11 April 1948.
- 6. The President of the Central Administration of Industry is to assist the factory and inform it of firms outside of Brandenburg which are to assist in the reconstruction. AEG Hennigsdorf is to offer its maximum assistance even to postponing important orders.
- 7. The rolling mill equipment is to be bought immediately; the fine-rolling unit is to come from Austria, additional parts from the Russian zone. Lt. Reppin of SMA is in charge of this purchase. Dr. Kraemer of the Central Administration of Industry is to negotiate the purchase of other equipment. Koval promised U. S. dollars or other currencies where necessary.

25X1

Comment: The LDP paper, <u>Der Morgen</u>, reported on 29 October 1947: "Reconstruction of the steel works in Hennigsdorf is in full swing. Manpower, machinery, and tools of the AEG cast steel plant in Hennigsdorf are being used. The original plan to merge the new plant with AEG has been dropped; it is now to become an independent state-owned factory. At present repair work on the generators has top priority."
